

Queen of ice bugs:

- Winning when switching gaming modes -
 - When choosing the games “All spots”, “Bonus”, “Wild Nudge Spot 1”, “Wild Nudge Spot 2” & “Wild Nudge Spot 3” - it rolls automatically and the first roll is always a win.
 - VERY SEVERE as the players always wins
- Adds +1 to the winnings -
 - To reproduce simply click on Features and choose one of the games

- When you win a game, the final winning amount is +1 than the actual win

- In the above screenshot you can see that i was supposed to win 750 points, but in the lower right the win bar is 751, and this is what's being added to the credit
- SEVERE - the players gets more than they should

- To reproduce just roll until win
- The ice queen picture is crooked-
 - When there's a queen in the first load, or if the bar has only a part of the queen card, it is crooked and out of focus. Only when it's displayed in full it looks good. Damaging the looks of the game

○

○

- Not severe but is important for the UX
- To reproduce - In the initial start of the game there are queen cards, it is visible there.

- J & Q never turn up -
 - I have rolled the game over and over and these cards never turn up in the final result.
 - Not too severe - but does increase the players chance to win, and lacks from the overall gaming experience.

- Windows key + Shift key removes features:
 - When the two keys are being pressed, the features bar suddenly disappears.
 
 - Not severe since chances are that the usual player will not press these keys for no reason, but needs attention.
 - To reproduce - just click the two keys together. A second click will restore the features
- 50 lines + typo:
 - In the upper right corner, the game states “50 lineas” - I may be wrong about this one, but it seems to be a short description meaning that we are playing a 50 lines game. In practice, the game is 25 lines and the bettings and winnings are for 25
 - Not severe
